Welcome

What it is, who it suits, its grades and the ten things to know first

1.6

GPA, above 0 of the 60 other browsers we grade

Silo Workspace from Authentic8 is a cloud-based investigation environment built around the Silo for Research browser. Analysts open isolated workspaces that route traffic through the vendor's own network of regional endpoints, so web research does not touch their own systems or reveal their identity. It is priced per user per year by how many regions are covered.

To get you started, here are **9 things to know about Authentic8 Silo**, taken from its own pages and our grades.

> **It is a cloud environment where analysts set up regions and workspaces, with a learning curve.**

5 Isolated workspaces

Each workspace runs apps in separate containers away from the user's network, so content from the threat space cannot reach local systems.

6 Managed attribution network

Traffic exits through 700+ endpoints across 100+ regions, with residential, mobile, data center, Tor and dark web options.

7 Apps beside the browser

Workspaces combine the Silo for Research browser with apps such as Telegram, Signal, Maltego, LibreOffice and Obsidian.

That is against the other browsers we grade, on value, the free plan, features, ease of use and platforms.

9 Keep it

To replace Authentic8 Silo you would be making a web browser. That is not a weekend's work, with an AI app builder or without one.

TOOLGPA REPORT CARD — **Authentic8 Silo** — Graded Nov 13, 2026

SUBJECT	GRADE	COMMENT

Free plan and trial	D	A 30-day trial with limited egress nodes is listed, but the listing does not say whether it needs a card, so it is graded as one that might.
Features	C	Isolated workspaces, a managed attribution network and audit, but Nexus AI is capped at 10 prompts a day on these tiers.
Ease of use	C	No rating on record. It is a cloud environment where analysts set up regions and workspaces, with a learning curve.
Platforms and integrations	C	A cloud environment reached from the web. The pages do not list client operating systems, though Telegram, Signal and Maltego run inside.

Grade point average — Weak, out of 4.0 **1.6**

An A is worth 4 points, a B 3, a C 2, a D 1 and an F nothing. The GPA is the average of the five.

What paid plans start at, a month (each step along is roughly double)

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Authentic8 Silo you would be making a web browser. That is not a weekend's work, with an AI app builder or without one.

That makes this kind of software worth paying for, not this one in particular: 58 of the 60 other browsers grade higher. It costs $1,450 a year.

What you could not

- ✕ A web browser.
- ✕ A library of papers and sources to search.
- ✕ It is priced for each person, which means accounts and billing for a team.

- ✕ It plugs into other products, Telegram, Signal and Maltego among them.
- ✕ AI features, unless you pay a model provider for each request yourself.
- ✕ What a company asks for before it lets staff use something: audit logs.

What this rests on. Authentic8 Silo's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
