Keep it

What you could not

- ✕ An AI agent, with the models and the safeguards behind it.
- ✕ Connections to other products, each kept working as those products change.
- ✕ A builder that other people can use without writing code.

What this rests on. Bolna's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
