Welcome

What it is, who it suits, its grades and the ten things to know first

2.4

GPA, above 37 of the 61 other email verification and deliverability tools we grade

BounceBan is an email verification service that says it can tell deliverable addresses from undeliverable ones even when the domain is catch-all or sits behind a secure email gateway. It offers single, bulk and API checks, plus a Sync feature that re-checks CRM contacts daily. Single checks in free mode cost no credits.

To get you started, here are **9 things to know about BounceBan**, taken from its own pages and our grades.

5 **Catch-all verification**

Uses its own methods to judge which catch-all, greylisted or gateway-protected addresses are deliverable, without sending a message.

6 **Free single checks**

Single email verification in Free Mode is free and unlimited, so results can be tried before buying credits.

7 **Bulk verification**

Upload a list to verify it in one pass. One credit is used for each successful verification through Single, Bulk or API.

8 **A 2.4 GPA, above 37 of 61**

That is against the other email verification and deliverability tools we grade, on value, the free plan, features, ease of use and platforms.

9 **Keep it**

To replace BounceBan you would be making connections to other products, each kept working as those products change. That is not a weekend's work, with an AI app builder or without one.
