Where it stands

Its grades against its category, and whether to keep it or make your own

22/101

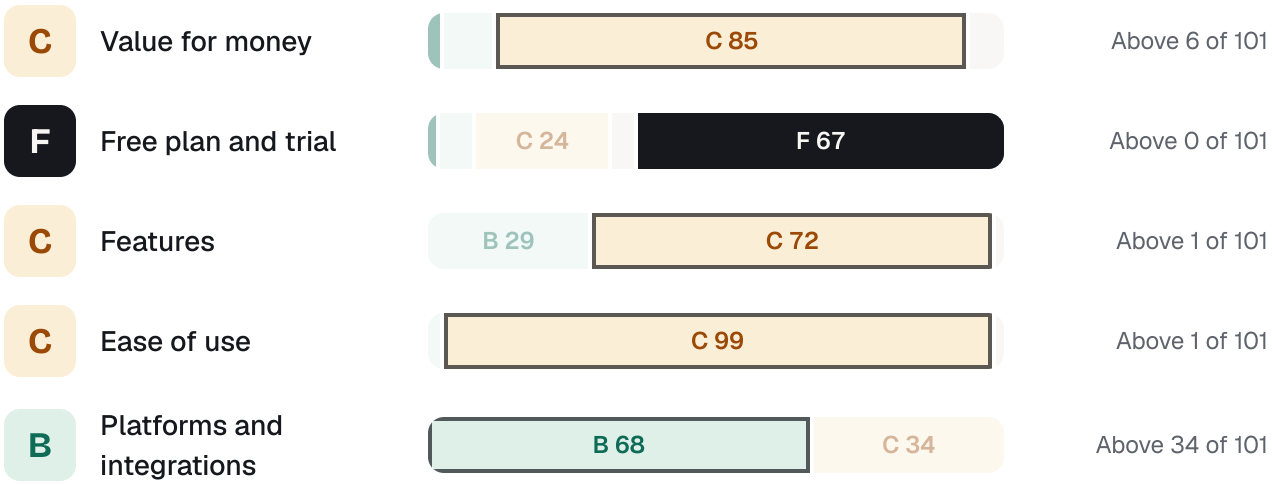

Other HR software it is graded above

CultureMonkey's GPA of 1.8 is higher than 22 of the 101 other HR software we grade, and level with 33.

It stands best on platforms and integrations (B, above 34 of 101) and worst on free plan and trial (F, above 0).

Each grade against the category

Every bar is all 102 HR software we grade, cut by the letter each got. CultureMonkey's own letter is outlined.

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace CultureMonkey you would be making the WhatsApp Business API, which Meta opens only through approved partners. That is not a weekend's work, with an AI app builder or without one.

That makes this kind of software worth paying for, not this one in particular: 46 of the 101 other HR software grade higher.

What you could make

- Surveys and reports: an app builder makes these well.

What you could not

- The WhatsApp Business API, which Meta opens only through approved partners.
- Connections that pull numbers from dozens of other services.
- It plugs into other products, Workday, SAP SuccessFactors and Oracle HCM among them.
- AI features, unless you pay a model provider for each request yourself.
- What a company asks for before it lets staff use something: single sign-on and roles and permissions.

What this rests on. CultureMonkey's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
