PART 04 · STANDING

Where it stands

Its grades against its category, and whether to keep it or make your own

132/149

Other project management tools it is graded above

Dart's GPA of 3.0 is higher than 132 of the 149 other project management tools we grade, and level with 10.

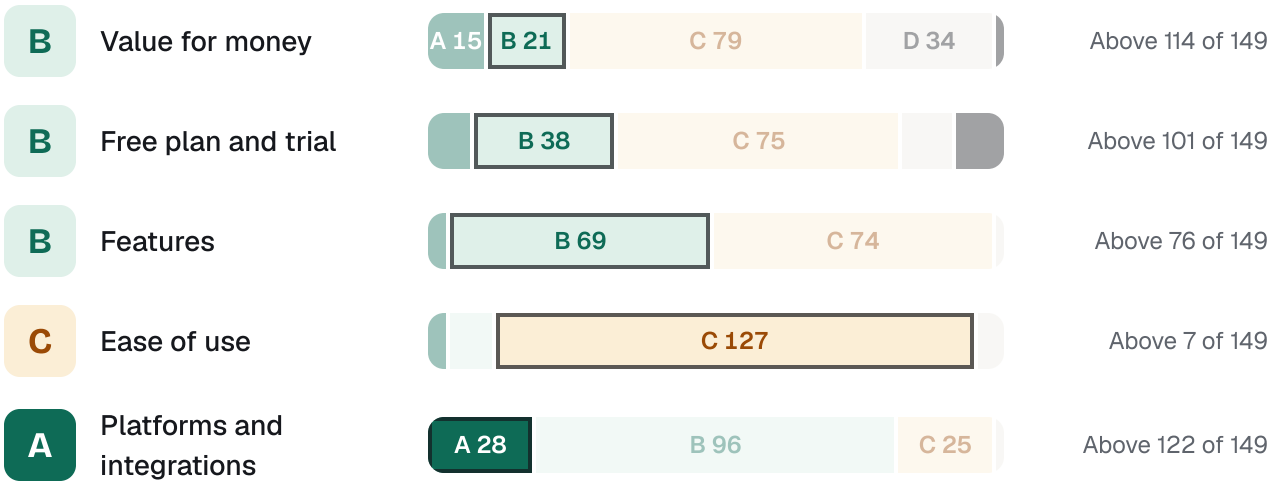

It stands best on platforms and integrations (A, above 122 of 149) and worst on ease of use (C, above 7).

Its paid plans start at $8 a month for each person, against a middle price of $9 for the category: 46 of the 121 others that charge start lower.

On features, ease of use and platforms it scores 3.0 out of 4. Nothing scores higher for less, though at least one tool matches that score at a lower price.

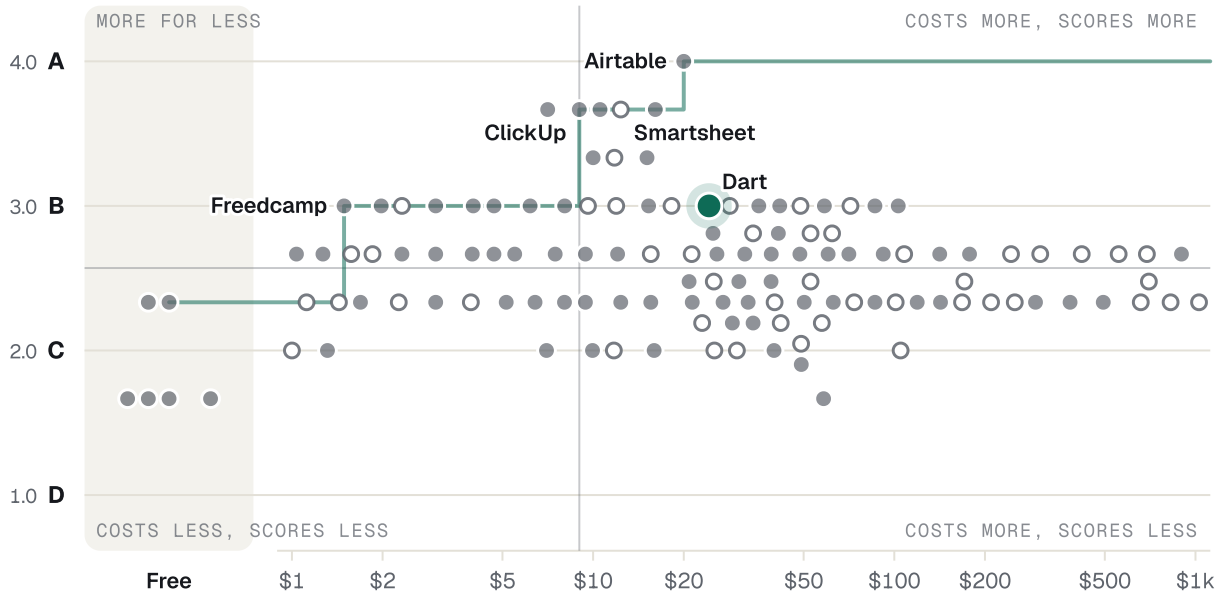

Each grade against the category

Every bar is all 150 project management tools we grade, cut by the letter each got. Dart's own letter is outlined.

Price against what you get

Each dot is one of 128 project management tools. Further left costs less; higher up scores better on features, ease of use and platforms. Dart is the marked dot.

What paid plans start at, a month (each step along is roughly double)

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Dart you would be making an AI agent, with the models and the safeguards behind it. That is not a weekend's work, with an AI app builder or without one.

It is one of the better ones too: its GPA of 3.0 is higher than 132 of the 149 other project management tools we grade. It costs $96 a year.

What you could make

- Kanban boards, time tracking and natural-language input: an app builder makes these well.

What you could not

- An AI agent, with the models and the safeguards behind it.
- Apps for macOS, Windows, Linux, iOS and Android that stay in step with each other.
- It is priced for each person, which means accounts and billing for a team.
- It plugs into other products, ChatGPT, Claude and Slack among them.
- The depth: we grade its features B, which means it covers the whole job.

What this rests on. Dart's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
