Keep it

Nothing EmailVerifier does is plain enough to make in a weekend. The 3 things listed below take a company.

It costs $18, paid once.

What you could not

- ✕ Checking that an address exists without writing to it.
- ✕ An API that other software can build on.
- ✕ What a company asks for before it lets staff use something: roles and permissions.

What this rests on. EmailVerifier's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
