As its pricing page puts it: $24.90 per month, billed annually.

5 Cross-border signing

The vendor says signatures are legally binding in 100+ countries and that it connects to 50+ trust service providers for advanced and qualified signing under eIDAS.

6 Identity verification

Signers can be checked by email or SMS code, passcode, SSO, Singpass or iAM Smart, with government ID checks on higher plans.

7 Templates and bulk send

Reusable templates prepare documents the same way each time, and bulk send sends one document to many signers while tracking each signature.

8 A 2.2 GPA, above 38 of 78

That is against the other e-signature and proposal tools we grade, on value, the free plan, features, ease of use and platforms.

9 Keep it

To replace eSignGlobal you would be making connections to other products, each kept working as those products change. That is not a weekend's work, with an AI app builder or without one.

PART 04 · STANDING

Where it stands

Its grades against its category, and whether to keep it or make your own

38/78

Other e-signature and proposal tools it is graded above

eSignGlobal's GPA of 2.2 is higher than 38 of the 78 other e-signature and proposal tools we grade, and level with 19.

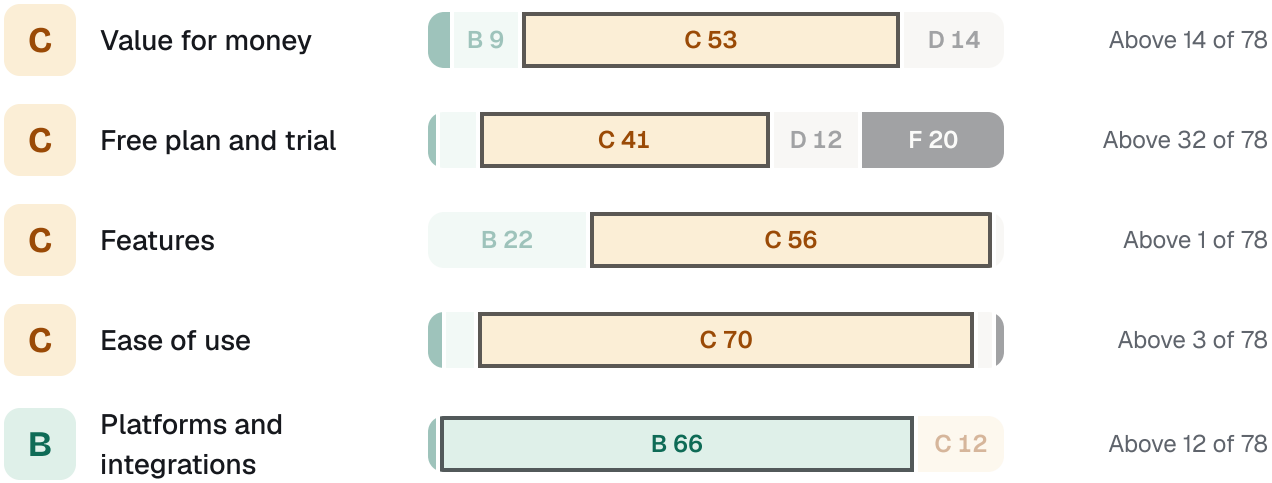

It stands best on platforms and integrations (B, above 12 of 78) and worst on features (C, above 1).

Its paid plans start at $24.90 a month, against a middle price of $19 for the category: 33 of the 54 others that charge start lower.

What paid plans start at, a month (each step along is roughly double)

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace eSignGlobal you would be making connections to other products, each kept working as those products change. That is not a weekend's work, with an AI app builder or without one.

It costs $298.80 a year.

What you could make

- Templates: an app builder makes this well.

What you could not

- Connections to other products, each kept working as those products change.

- AI features, unless you pay a model provider for each request yourself.
- What a company asks for before it lets staff use something: single sign-on.

What this rests on. eSignGlobal's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
