Welcome

What it is, who it suits, its grades and the ten things to know first

2.6

GPA, above 66 of the 98 other time tracking apps we grade

ezClocker is a cloud-based employee time clock for small businesses. Employees clock in and out from iPhone, Android or a browser, and the app records their GPS location at each punch. Higher plans add job assignments, time off, overtime reports and payroll integrations. Plans are flat monthly prices by number of employees.

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace ezClocker you would be making payroll taxes worked out and filed with the government for you. That is not a weekend's work, with an AI app builder or without one.

It is one of the better ones too: its GPA of 2.6 is higher than 66 of the 98 other time tracking apps we grade. It costs $150 a year.

What you could make

- Time tracking, time off and reports: an app builder makes these well.

What you could not

- Payroll taxes worked out and filed with the government for you.

- ✕ Clocking in from a phone, checked against where and when.
- ✕ A rota the whole staff sees on their phones, with swaps and alerts.
- ✕ A real app for iOS and Android. Something home-made would be a web page.
- ✕ It plugs into other products, QuickBooks Online, ADP Workforce Now and Paychex Flex among them.

What this rests on. ezClocker's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
