# Welcome

What it is, who it suits, its grades and the ten things to know first

**2.2**

GPA, above 81 of the 178 other AI agents we grade

Fellou is a desktop web browser that has AI agents built in. You describe a goal, it drafts a step-by-step plan you can edit, and then it carries out the work across sites, including pages you are logged in to, and can also write research reports with cited sources. A paid credit system called Sparks limits how much work each plan gets.

>
> **You learn how Sparks and scheduling work and check the agent's results.**
>
> From our grade for ease of use

To get you started, here are **9 things to know about Fellou**, taken from its own pages and our grades.

Fellou is a browser that plans and runs web tasks, writes research reports and schedules jobs.

**5** **Plan first, then act**

**6** **Browser automation**

The Browser Use feature automates workflows that span sites, such as scraping data and filling in forms, from a single command.

**7** **Deep research reports**

It searches across the web, including logged-in accounts such as Reddit, and produces reports with sources you can check.

**8** **A 2.2 GPA, above 81 of 178**

That is against the other AI agents we grade, on value, the free plan, features, ease of use and platforms.

**9** **Keep it**

## Keep it, or make your own?

It costs $192 a year.

**What you could not**

- ✕ An AI agent, with the models and the safeguards behind it.
- ✕ A web browser.

- ✕ A library of papers and sources to search.
- ✕ Connections to other products, each kept working as those products change.
- ✕ A real app for macOS and Windows. Something home-made would be a web page.

**What this rests on.** Fellou's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
