PART 04 · STANDING

Where it stands

Its grades against its category, and whether to keep it or make your own

15/56

Other SERP and SEO data APIs it is graded above

Geekflare API's GPA of 2.2 is higher than 15 of the 56 other SERP and SEO data APIs we grade, and level with 11.

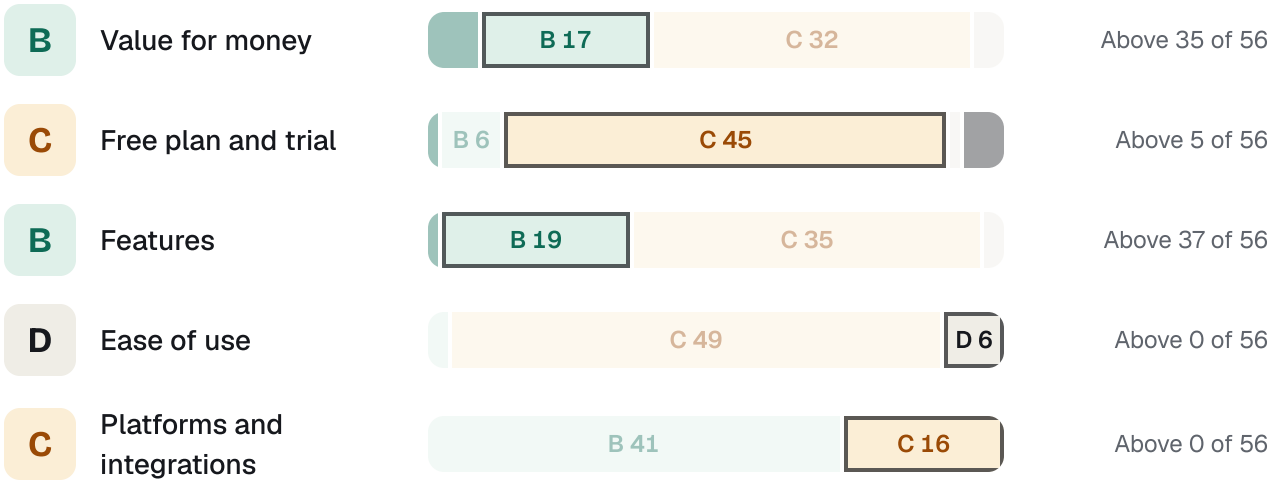

It stands best on features (B, above 37 of 56) and worst on ease of use (D, above 0).

Its paid plans start at $19 a month, against a middle price of $29 for the category: 5 of the 39 others that charge start lower.

Price against what you get

Each dot is one of 41 SERP and SEO data APIs. Further left costs less; higher up scores better on features, ease of use and platforms. Geekflare API is the marked dot.

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Geekflare API you would be making search results fetched at scale from many countries without being blocked. That is not a weekend's work, with an AI app builder or without one.

That makes this kind of software worth paying for, not this one in particular: 30 of the 56 other SERP and SEO data APIs grade higher. It costs $228 a year.

What you could not

- ✕ Search results fetched at scale from many countries without being blocked.
- ✕ Speed tests run from real browsers on a schedule.

- ✕ An API that other software can build on.
- ✕ Sharing with other people, which means accounts and invitations.
- ✕ The depth: we grade its features B, which means it covers the whole job.

What this rests on. Geekflare API's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
