PART 04 · STANDING

Where it stands

Its grades against its category, and whether to keep it or make your own

38/38

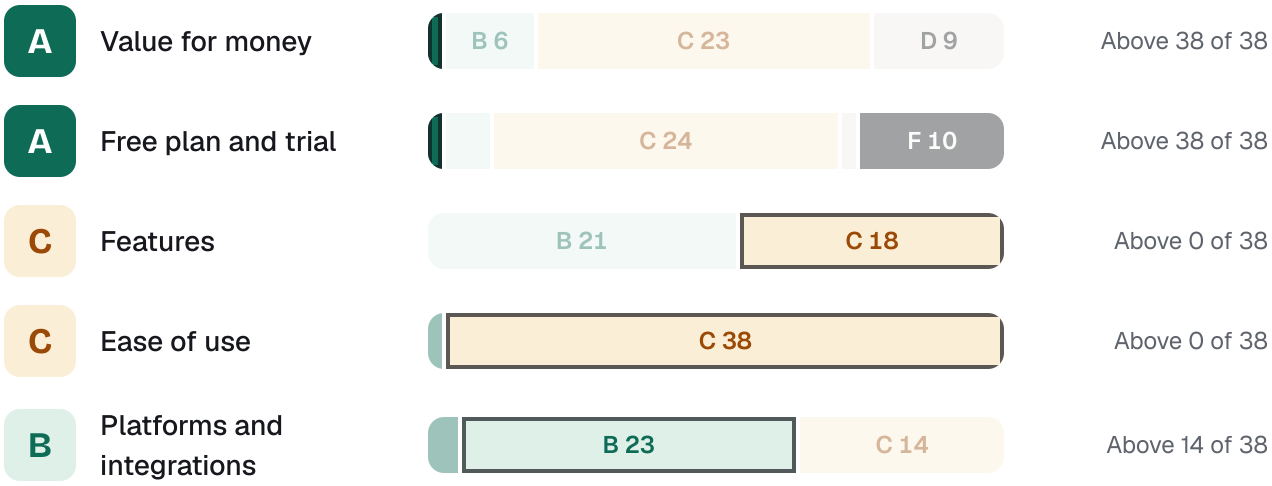

Other therapy and clinic software it is graded above

Halaxy's GPA of 3.0 is higher than 38 of the 38 other therapy and clinic software we grade.

It stands best on value for money (A, above 38 of 38) and worst on features (C, above 0).

Each grade against the category

Every bar is all 39 therapy and clinic software we grade, cut by the letter each got. Halaxy's own letter is outlined.

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Halaxy you would be making insurance claims sent to payers through a clearinghouse. That is not a weekend's work, with an AI app builder or without one.

It is one of the better ones too: its GPA of 3.0 is higher than 38 of the 38 other therapy and clinic software we grade.

What you could make

- Appointment booking, clinical notes and reports: an app builder makes these well.

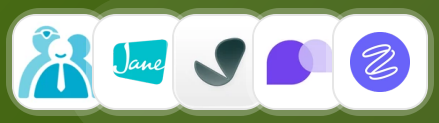

What you could not

- Insurance claims sent to payers through a clearinghouse.
- Video sessions that meet health privacy rules.
- AI features, unless you pay a model provider for each request yourself.

What this rests on. Halaxy's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
