PART 04 · STANDING

Where it stands

Its grades against its category, and whether to keep it or make your own

104/133

Other screen recording and video tools it is graded above

Kommodo's GPA of 2.8 is higher than 104 of the 133 other screen recording and video tools we grade, and level with 15.

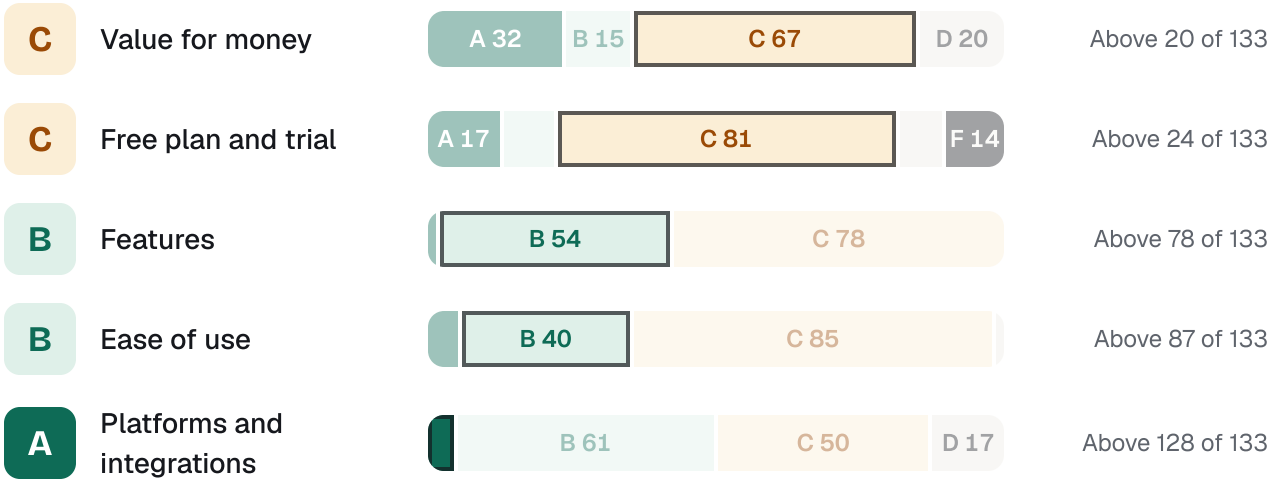

It stands best on platforms and integrations (A, above 128 of 133) and worst on value for money (C, above 20).

Its paid plans start at $9 a month for each person, against a middle price of $12.25 for the category: 28 of the 88 others that charge start lower.

On features, ease of use and platforms it scores 3.3 out of 4. Nothing scores higher for less, though at least one tool matches that score at a lower price.

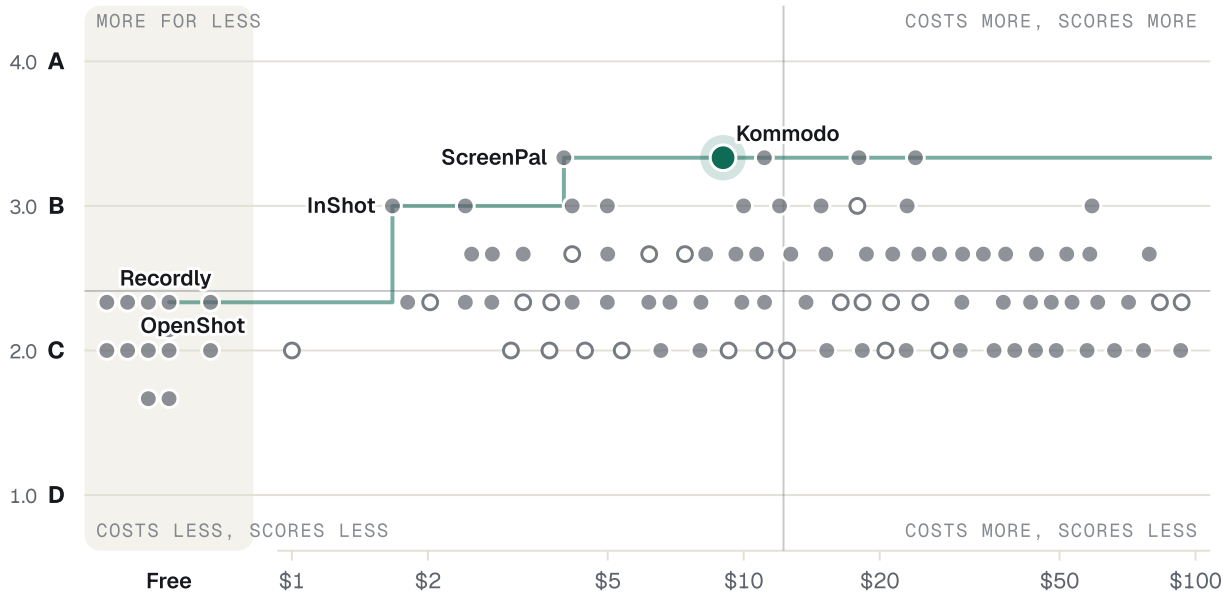

Each grade against the category

Every bar is all 134 screen recording and video tools we grade, cut by the letter each got. Kommodo's own letter is outlined.

Price against what you get

Each dot is one of 102 screen recording and video tools. Further left costs less; higher up scores better on features, ease of use and platforms. Kommodo is the marked dot.

What paid plans start at, a month (each step along is roughly double)

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Kommodo you would be making a bot that joins your calls and turns the talk into notes. That is not a weekend's work, with an AI app builder or without one.

It is one of the better ones too: its GPA of 2.8 is higher than 104 of the 133 other screen recording and video tools we grade. It costs $108 a year.

What you could not

- ✕ A bot that joins your calls and turns the talk into notes.
- ✕ A video editor.

- ✕ Recording the screen with its sound, and somewhere to keep the video.
- ✕ Speech turned into text you can trust.
- ✕ Apps for macOS, Windows, iOS and Android that stay in step with each other.
- ✕ It is priced for each person, which means accounts and billing for a team.
- ✕ It plugs into other products, Google Calendar, Slack and Jira among them, and has an API.
- ✕ AI features, unless you pay a model provider for each request yourself.
- ✕ The depth: we grade its features B, which means it covers the whole job.

What this rests on. Kommodo's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
