Welcome

What it is, who it suits, its grades and the ten things to know first

1.8

GPA, above 5 of the 63 other spreadsheet and database tools we grade

Sheet2API gives a Google Sheet or an Excel Online workbook a hosted REST endpoint with caching and optional API key security, so apps can read and write rows without OAuth or a server. An MCP server is offered for AI agents. Every plan starts with a 7-day trial that needs a card, and prices on the site are shown in pounds sterling.

To get you started, here are **9 things to know about Sheet2API**, taken from its own pages and our grades.

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Sheet2API you would be making a builder that other people can use without writing code. That is not a weekend's work, with an AI app builder or without one.

That makes this kind of software worth paying for, not this one in particular: 56 of the 63 other spreadsheet and database tools grade higher. It costs $482.20 a year.

What you could make

- Forms: an app builder makes this well.

What you could not

- A builder that other people can use without writing code.

- A spreadsheet engine with its formulas.
- It plugs into other products, Google Sheets and Excel Online among them, and has an API.

What this rests on. Sheet2API's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
