Where it stands

Its grades against its category, and whether to keep it or make your own

13/17

Other email signature tools it is graded above

It stands best on value for money (B, above 10 of 17) and worst on ease of use (C, above 0).

Its paid plans start at $1 a month, against a middle price of $2.33 for the category: 1 of the 14 others that charge start lower.

Each grade against the category

Every bar is all 18 email signature tools we grade, cut by the letter each got. Sigsync's own letter is outlined.

Price against what you get

Each dot is one of 15 email signature tools. Further left costs less; higher up scores better on features, ease of use and platforms. Sigsync is the marked dot.

What paid plans start at, a month (each step along is roughly double)

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Sigsync you would be making email sent in volume that still reaches the inbox. That is not a weekend's work, with an AI app builder or without one.

It is one of the better ones too: its GPA of 2.6 is higher than 13 of the 17 other email signature tools we grade. It costs $12 a year.

What you could make

- Email signature and templates: an app builder makes these well.

What you could not

- Email sent in volume that still reaches the inbox.

- What a company asks for before it lets staff use something: SOC 2 and HIPAA.
- The depth: we grade its features B, which means it covers the whole job.

What this rests on. Sigsync's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
