What it is, who it suits, its grades and the ten things to know first

2.4

GPA, above 44 of the 91 other file storage and sync services we grade

TeamDrive is a file sync and sharing service run from Germany for businesses and public bodies. Files live in shared Spaces that are encrypted end to end, and data is held in German data centers. It also covers large-file sending by link, an Outlook add-in and archiving with set retention periods.

To get you started, here are **9 things to know about TeamDrive**, taken from its own pages and our grades.

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace TeamDrive you would be making files kept in step across devices without losing one. That is not a weekend's work, with an AI app builder or without one.

It costs $84.91 a year.

What you could not

- ✕ Files kept in step across devices without losing one.
- ✕ Storing and serving files for other people.

- Apps for macOS, Windows, Linux, iOS and Android that stay in step with each other.
- End-to-end encryption done properly.
- What a company asks for before it lets staff use something: roles and permissions.
- The depth: we grade its features B, which means it covers the whole job.

What this rests on. TeamDrive's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
