49/85

Other remote desktop apps it is graded above

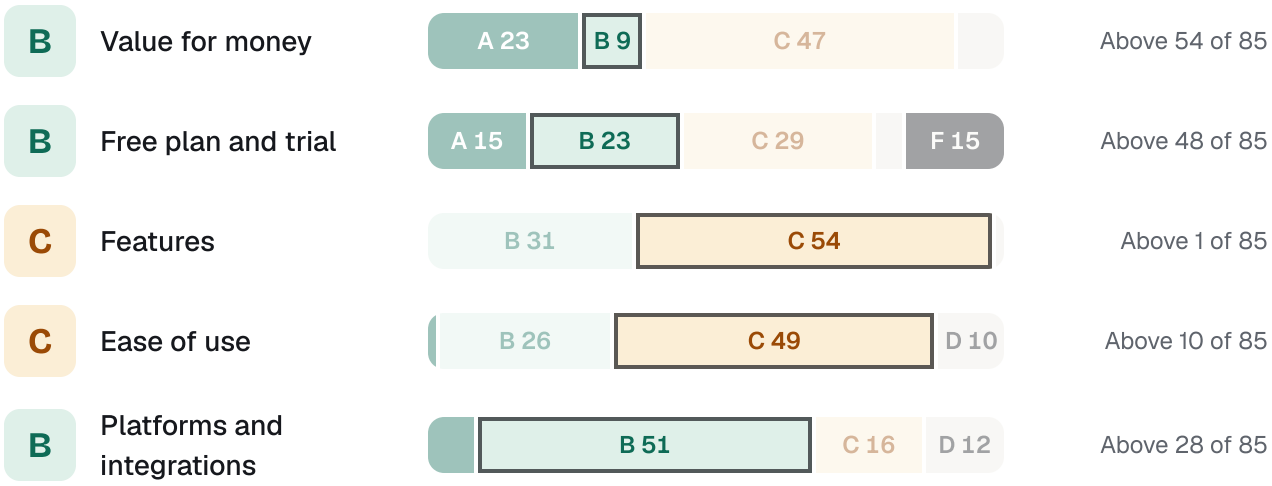

ToolGPA

ToDesk's GPA of 2.6 is higher than 49 of the 85 other remote desktop apps we grade, and level with 19.

It stands best on value for money (B, above 54 of 85) and worst on features (C, above 1).

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace ToDesk you would be making a fast, secure link to another computer through any network. That is not a weekend's work, with an AI app builder or without one.

What you could not

- A fast, secure link to another computer through any network.
- Storing and serving files for other people.
- Capture tools hooked into the operating system.
- Apps for macOS, Windows, Linux, iOS and Android that stay in step with each other.

What this rests on. ToDesk's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
