Welcome

What it is, who it suits, its grades and the ten things to know first

1.6

GPA, above 0 of the 178 other AI agents we grade

Vogent is a platform for building voice agents that make and take phone calls. It offers a no-code flow builder, an API with SDKs, its own phone-tuned language models and voices, IVR detection, call history and post-call automations. It also lists HIPAA-compliant workspaces.

To get you started, here are **7 things to know about Vogent**, taken from its own pages and our grades.

> From our grade for ease of use

1 **Best for voice agents that handle phone menus**

Vogent is a platform for phone agents with a flow builder, phone-menu navigation and call analysis.

2 **It runs on Web**

Web.

3 **Flow Builder**

A no-code builder for agents that ask questions, hold conversations on set topics and call external tools, hosted on phone numbers chosen by area code.

4 **IVR detection and navigation**

Models that recognize phone menus and press the right keys so an outbound agent can reach a person.

5 **Phone-tuned models**

Vogent's own conversational models, tuned on noisy phone calls, plus off-the-shelf models and a way to connect your own OpenAI-compatible model.

6 **A 1.6 GPA, above 0 of 178**

That is against the other AI agents we grade, on value, the free plan, features, ease of use and platforms.

7 **Keep it**

To replace Vogent you would be making an AI agent, with the models and the safeguards behind it. That is not a weekend's work, with an AI app builder or without one.

Grade point average — Weak, out of 4.0 **1.6**

An A is worth 4 points, a B 3, a C 2, a D 1 and an F nothing. The GPA is the average of the five.

Who Vogent is for

- ✓ Fits if your agents need to call businesses and get through phone menus
- ✓ Works for developers building voice agents with transfers and tools

Who it is not for

- ✗ Skip it if you want a price, as none could be read
- ✗ Not for you if you want a free way in, since none is on record
- ✗ Watch out: the site says it is pending a SOC 2 Type II audit report
- ✗ Tight if you need fine-tuning, which is listed for enterprise only

Good to know

Good for

- ✓ Healthcare and insurance teams making calls that need HIPAA-compliant workspaces
- ✓ Developers who want a voice-agent API with SDKs
- ✓ Teams placing outbound calls that must get through phone menus

Worth knowing

- ⓘ No prices could be read: the pricing section on the homepage did not load in text form, so none are listed here.
- ⓘ Fine-tuning with Vogent's solutions engineers is listed for the enterprise plan only.
- ⓘ The site says it is pending a SOC 2 Type II audit report.

What it costs

Every plan, the free plan, ways to pay less and how prices have moved

Vogent's current pricing could not be confirmed from its own site.

> **No prices could be read, so it sits in the middle by default.**

We could not confirm Vogent's current prices from its own site, so this guide lists no plans. vogent.ai has them.

What it does

Its main features, where it runs, what it works with and who makes it

1

Place it runs: Web

Platform for building and hosting voice AI agents. Here is what it does, as its own site describes it, and what it covers: public API, workflow automation, AI agents, no-code.

> **Flow builder, IVR detection and navigation, phone-tuned models, call history and analysis, transfers and knowledge bases.**
>
> From our grade for features

Flow Builder

A no-code builder for agents that ask questions, hold conversations on set topics and call external tools, hosted on phone numbers chosen by area code.

IVR detection and navigation

Models that recognize phone menus and press the right keys so an outbound agent can reach a person.

Phone-tuned models

Vogent's own conversational models, tuned on noisy phone calls, plus off-the-shelf models and a way to connect your own OpenAI-compatible model.

Call history and analysis

Every call has a recording and transcript, extracted outcomes, and counterfactual analysis that tests new agents against past calls.

Transfers, knowledge bases and tools

Calls can transfer to a human or another agent, look up uploaded documents live, and hit APIs during the call.

Where it stands

Its grades against its category, and whether to keep it or make your own

0/178

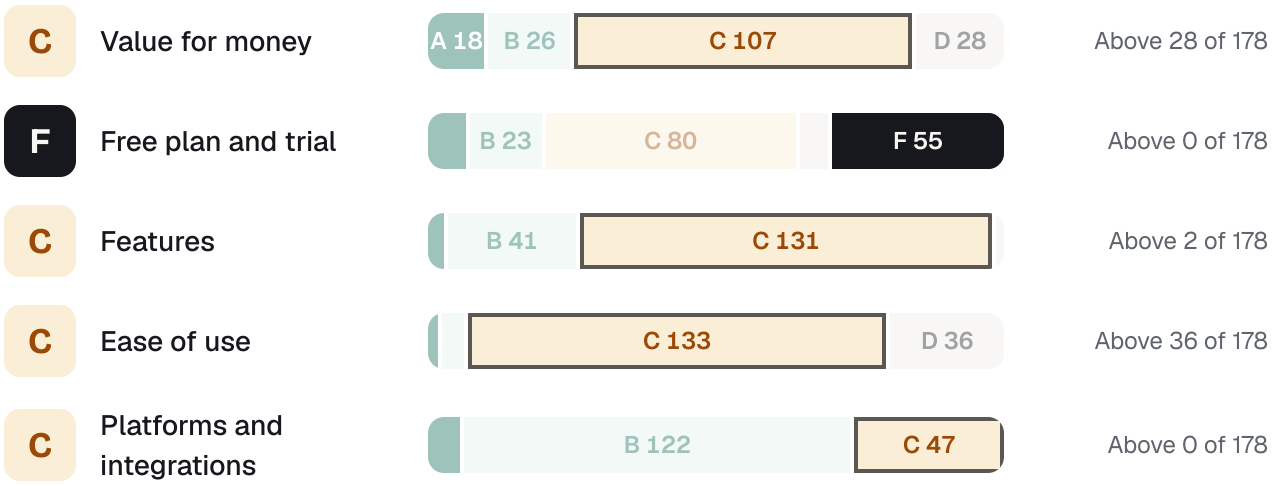

Other AI agents it is graded above

Vogent's GPA of 1.6 is higher than 0 of the 178 other AI agents we grade, and level with 29.

It stands best on ease of use (C, above 36 of 178) and worst on free plan and trial (F, above 0).

Each grade against the category

Every bar is all 179 AI agents we grade, cut by the letter each got. Vogent's own letter is outlined.

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Vogent you would be making an AI agent, with the models and the safeguards behind it. That is not a weekend's work, with an AI app builder or without one.

That makes this kind of software worth paying for, not this one in particular: 149 of the 178 other AI agents grade higher.

What you could not

- ✕ An AI agent, with the models and the safeguards behind it.
- ✕ A builder that other people can use without writing code.
- ✕ Connections to other products, each kept working as those products change.
- ✕ What a company asks for before it lets staff use something: HIPAA.

What this rests on. Vogent's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
