Each dot is one of 35 voice dictation apps. Further left costs less; higher up scores better on features, ease of use and platforms. VoiceDash is the marked dot.

What paid plans start at, a month (each step along is roughly double)

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace VoiceDash you would be making dictation that types into any app on your computer. That is not a weekend's work, with an AI app builder or without one.

It costs $144 a year.

What you could not

- ✕ Dictation that types into any app on your computer.
- ✕ A bot that joins your calls and turns the talk into notes.

- ✕ Speech turned into text you can trust.
- ✕ Text expansion that works in every app.
- ✕ Apps for macOS, Windows, Linux, iOS and Android that stay in step with each other.
- ✕ It plugs into other products, Notion, Slack and Google Docs among them.
- ✕ AI features, unless you pay a model provider for each request yourself.
- ✕ The depth: we grade its features B, which means it covers the whole job.

What this rests on. VoiceDash's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
