Welcome

What it is, who it suits, its grades and the ten things to know first

2.0

GPA, above 8 of the 61 other email verification and deliverability tools we grade

Webbula sells email hygiene through Zuvo, its data platform, whose first product is Protect. Protect offers four scans: verification, threat detection, both together, and lead validation. Credits can be bought as needed or taken as a monthly allotment, and verification runs by bulk upload, batch or API.

To get you started, here are **9 things to know about Webbula**, taken from its own pages and our grades.

1 **Best for email checks plus threat scans in its Zuvo platform**

Webbula's Zuvo verifies addresses and scans for threats, from $24.95 a month for 2,500 credits.

2 **Paid plans start at $24.95 a month**

As its pricing page puts it: $24.95 per month for 2,500 credits.

3 **You can try it first**

4 **It runs on Web**

Web.

5 **Four Protect scans**

Threat Detection plus Verification, Threat Detection only, Verification only, and Lead Validation, all on both plans.

6 **Email verification**

Checks format, syntax, domain, MX records and mailbox signals, and sorts addresses into valid, invalid, risky, catch-all or unknown.

7 **Threat detection**

The Core plan page cites more than 50 threat detection methods, with results grouped by risk category.

8 **A 2.0 GPA, above 8 of 61**

That is against the other email verification and deliverability tools we grade, on value, the free plan, features, ease of use and platforms.

9 **Keep it**

Nothing Webbula does is plain enough to make in a weekend. The 2 things listed below take a company.

Who Webbula is for

- ✓ Fits if you want threat scans alongside address checks
- ✓ Works for small teams on a fixed monthly credit pack

Who it is not for

- ✕ Watch out: On Demand and add-on credit rates sit behind a slider and weren't read
- ✕ Skip it if you want a free plan, as it's only 100 sign-up credits
- ✕ Skip it if you want apps or integrations, as none are listed
- ✕ Watch out: enterprise needs go through sales rather than listed plans

Good to know

Good for

- ✓ Marketers who want threat checks alongside verification
- ✓ Occasional list cleaners buying credits as needed
- ✓ Small teams with steady monthly volume

Worth knowing

- ⓘ Per-credit rates for On Demand and add-on credits sit behind a slider and were not read.
- ⓘ Enterprise needs are handled through sales rather than listed plans.
- ⓘ Webbula also sells data appends and audience segments that are separate from Zuvo.
- ⓘ No mobile or desktop apps are listed; use is through the web platform and API.

PART 04 · STANDING

Where it stands

Its grades against its category, and whether to keep it or make your own

8/61

Other email verification and deliverability tools it is graded above

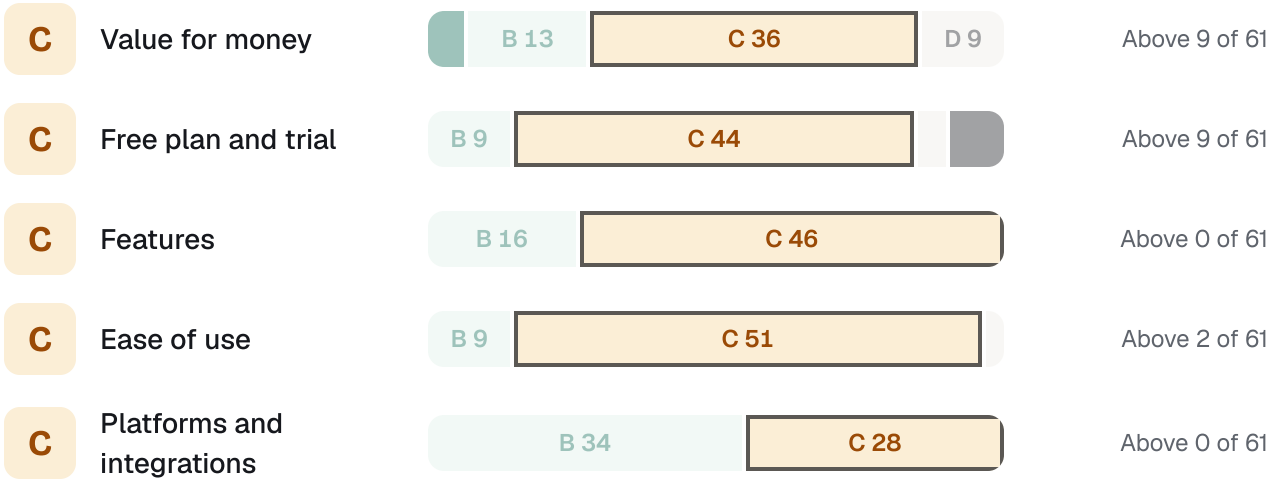

Webbula's GPA of 2.0 is higher than 8 of the 61 other email verification and deliverability tools we grade, and level with 14.

Its paid plans start at $24.95 a month, against a middle price of $21.50 for the category: 25 of the 43 others that charge start lower.

On features, ease of use and platforms it scores 2.0 out of 4. 14 tools score higher and cost less.

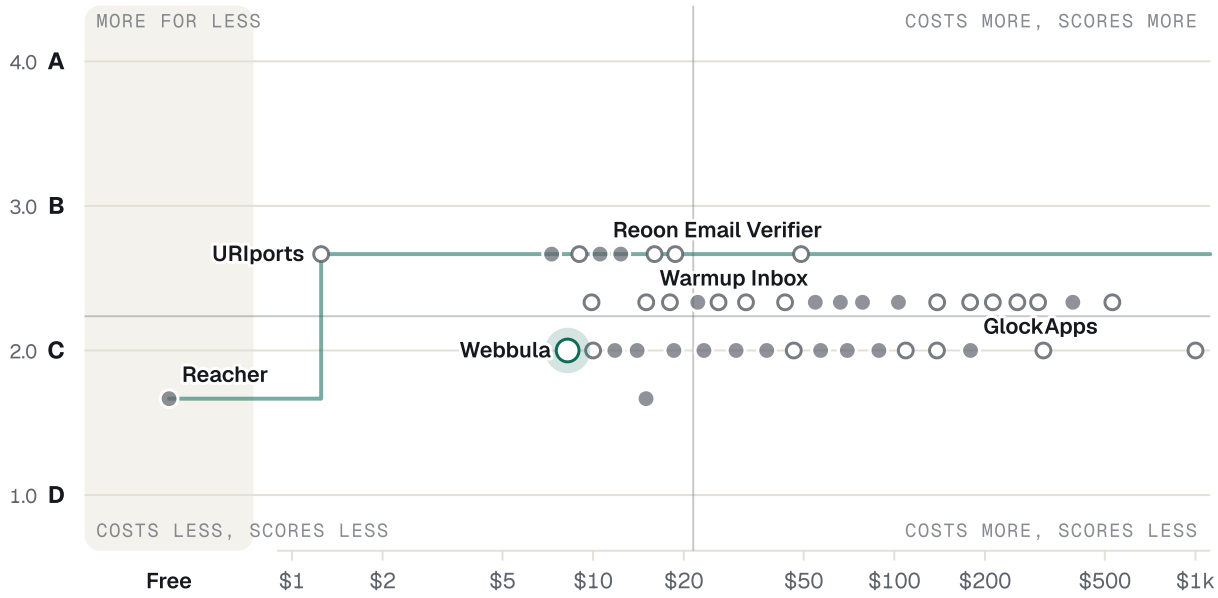

Each grade against the category

Every bar is all 62 email verification and deliverability tools we grade, cut by the letter each got. Webbula's own letter is outlined.

Price against what you get

Each dot is one of 45 email verification and deliverability tools. Further left costs less; higher up scores better on features, ease of use and platforms. Webbula is the marked dot.

What paid plans start at, a month (each step along is roughly double)

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

Nothing Webbula does is plain enough to make in a weekend. The 2 things listed below take a company.

That makes this kind of software worth paying for, not this one in particular: 39 of the 61 other email verification and deliverability tools grade higher. It costs $299.40 a year.

What you could not

- ✕ Checking that an address exists without writing to it.
- ✕ An API that other software can build on.

What this rests on. Webbula's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
