Who Webuzo is for

- ✓ Fits if you run one VPS with a single site owner and want the lowest panel price
- ✓ Makes sense if you resell hosting and want WHMCS or Blesta billing hooks

Who it is not for

- ✕ Skip it if you want hosting included, because Webuzo is a licence only
- ✕ Tight if you host more than one user, since Personal covers a single account
- ✕ Pricey if you want dedicated-server licences, which cost more than the matching VPS tier
- ✕ Watch out: Softaculous is listed at $1.50 to $2.50 a month beside Mini, Professional and Business
- ✕ Watch out: 18% GST applies to Indian sales, and refunds are open for a month on yearly licences and 7 days on monthly ones

Good to know

Good for

- ✓ Hosting providers and resellers selling accounts from their own servers
- ✓ Single-server owners who want a low-cost panel with an app installer

Worth knowing

- ⓘ This is a license for a panel, not hosting: you provide the cloud, VPS or dedicated server.
- ⓘ Dedicated-server licenses cost more than the matching cloud/VPS tier, and the lower tiers cap user accounts.
- ⓘ Softaculous from $1.5 to $2.5 a month is listed beside the Mini, Professional and Business plans; only Personal says it is included.
- ⓘ 18% GST applies to sales within India; refunds are open for one month on yearly licenses and 7 days on monthly ones.

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

You could make this

What Webuzo does at its core is plain work, and that is the kind of thing an AI app builder makes well.

You would give up 2 things, listed below, and little else. It costs $30 a year. An AI app builder starts at about $20 a month on our listings, and you only need it while you build.

What you could make

- It runs in a browser, which is where something home-made would run too.

What you could not

- It is priced for each person, which means accounts and billing for a team.
- It plugs into other products, WHMCS, Blesta and Softaculous among them, and has an API.

What this rests on. Webuzo's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
