It stands best on platforms and integrations (B, above 40 of 45) and worst on value for money (D, above 0).

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Wobo you would be making connections to other products, each kept working as those products change. That is not a weekend's work, with an AI app builder or without one.

That makes this kind of software worth paying for, not this one in particular: 26 of the 45 other resume builders grade higher. It costs $419.88 a year.

What you could make

- Resume builder: an app builder makes this well.

What you could not

- Connections to other products, each kept working as those products change.
- A real app for iOS. Something home-made would be a web page.
- AI features, unless you pay a model provider for each request yourself.

What this rests on. Wobo's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
