Workflow86's GPA of 2.2 is higher than 54 of the 134 other automation tools we grade, and level with 35.

It stands best on platforms and integrations (B, above 39 of 134) and worst on features (C, above 2).

Keep it, or make your own?

Whether this is something you could build for yourself with an AI app builder, and what you would give up.

Keep it

To replace Workflow86 you would be making connections to other products, each kept working as those products change. That is not a weekend's work, with an AI app builder or without one.

What you could make

- Forms: an app builder makes this well.

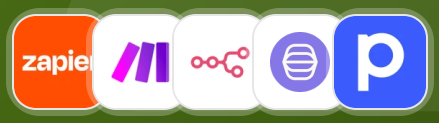

What you could not

- Connections to other products, each kept working as those products change.
- A builder that other people can use without writing code.
- An AI agent, with the models and the safeguards behind it.

What this rests on. Workflow86's listing: what it does, where it runs, what it plugs into and what it costs. It is a judgement about the kind of software this is. We have not built a replacement for it, and making your own means looking after it too. How we decide, and every tool's verdict.
